

VIII. Mini Project-Amazon Sales Analysis

AIM:

To clean, process, analyze, and visualize Amazon sales data using Python, Power BI, and Tableau, and develop interactive dashboards to derive meaningful insights into sales performance, products, customers, order status, and regional trends.

DOMAIN:

E-Commerce / Sales Analytics

PROBLEM STATEMENT:

With the increasing volume of e-commerce transactions, analyzing sales performance, customer purchasing patterns, product categories, order status, and regional demand manually becomes difficult. There is a need for a data-driven analytics system that cleans and processes Amazon sales data and presents meaningful insights through interactive visualizations and dashboards. The project aims to identify sales trends, high-performing products and categories, customer and regional patterns, and order-status trends using Python, Power BI, and Tableau.

OUTPUT:

Python:

PowerBI:

Tableau:

RESULT:

Thus, the given program was written and executed successfully.
